Potential Game to Play with Baker Targets' **Arcade** Game Target:

2 Players (can have more)

-Each player is going to aim for all 13 bullseyes on the target. The easiest would be for each player to take all 13 shots at once and add up points after each player's turn. However, you could take turns one shot at a time and add up as you go.

Point Distribution

- Each shot within a red bullseye equals 100 points (so 1300 is the most points you can have at the end)
- Each shot within the outer rings of a bullseye equals 50 points
- Each shot that hits an animal (duck, bunny or pig) equals 25 points
- Each shot that misses both bullseye and animal equals **NEGATIVE** 25 points

-Add up points for all 13 shots. Person with most points wins.

Potential Game for Baker Targets' **Battleship** Target:

Rules are fairly similar to the board game, but there are some added challenges you may choose to accept.

2 Players

-Remember, the goal is to take down your **opponent's ships**, not your own ships. Therefore, Player 1 aims for Player 2's board, and Player 2 aims for Player 1's board. The board that has all the squares of the ships "sunk" (hit) first is the **loser**.

-A hit includes **any part** of the square that has part of a ship in it. It does **not** matter which order you choose to sink the ships, i.e. you do not need to go smallest to largest ship (*unless you wish to make a personal rule accommodation*).

<u>Added fun/challenge:</u>

-On your turn, you may choose to aim for one of the **darker blue** circles on the board instead of aiming for one of the ship squares. *You must make it known beforehand which dark blue circle you are aiming for.*

-If you hit part of the dark blue circle on that turn, you may choose any square of any ship as a replacement hit.

-If you hit the **very white center** of that dark blue circle, you get to "sink" the **next largest ship** on the board that is not fully sunk yet (yes, the **entire ship**).

-However, if your shot hits **outside** the circle **at all** (even if your shot is still technically in the square), you **lose your entire next turn** (i.e. the other player gets to shoot twice in a row).

Potential Games to Play with Baker Targets' **Dartboard** Target:

Game Number One: A Game of Points

2 or more Players

-Each player takes 10 shots at the board (you can choose to take more or less, depending on number of players/time/etc). Players can take turns or go one person at a time.

How points are assessed:

-You must announce which number you are aiming for **before** taking your shot. This ensures no cheating.
-If you hit inside the **white area** of the number, you receive the **same points** as that number.
-If you hit in the **outer ring** (black or red, depending on which number it is), you receive **double the points** as that number.
-If you hit in the **inner ring** (black or red, depending on which number it is), you receive **triple the points** as that number.

-After all players have taken their 10 shots, it's time to take the final shot at the bullseye. All players get 1 shot at the bullseye.
-If you hit the **outer red** part of the bullseye, you get an **extra 25** points to your score.
-If you hit the **inner black** part of the bullseye, you get an **extra 50** points to your score.

-Player with the most points at the end wins the game!

Game Number Two: A Game of Numbers

2 Players

-This game is pretty straightforward. The objective is simply to **hit each number in order from 1-20** (as long as you hit **anywhere inside the number**, it counts as a hit).
-If you **miss** a number, your **turn is over** and it's the next player's turn to try.
-Whoever reaches 20 first **must also** hit anywhere in the **bullseye** at the end to secure the win.
-If the first player makes it through 1-20 and hits the bullseye, player two still gets a turn to go. If player two also makes it through, whoever has the closer bullseye shot is declared the winner.

Potential Game to Play with Baker Targets' **Pinball** Target:

2 Players

-Round One: Each player takes **6 shots** on the outside areas of the target (all areas **except** the center Bonus section and the "Collect" Man). Players can take turns shooting or shoot 1 person at a time.

-If a player hits the purple (10 point) token, they get to take an extra shot on the outside areas. If they hit both purple tokens, they can take 2 extra shots. No more than 2 extra shots allowed.

-If a player hits the **very center** of any of the **"star" *** tokens (they **must** hit the very center of the star), that player gets to take a shot inside the **"Bonus" section**. 1 Bonus shot per each star center that is hit during the first 6 shots.

-Round Two: Once each player finishes their 6 shots plus any extra/bonus shots, they add up their total points. The player with the **most points** gets **first try** at the **"Collect" Man**. Whoever hits the 100 center of the "Collect" Man first, wins the entire game (even if their overall points from Round One are less than the other player's).

Potential Game to Play with Baker Targets' **Candyville** Target:

2 Players (can have up to 6 players)

-Each player chooses a color. That remains their color through the entire game.

-Players take turns, one at a time. The objective is to hit each of your color's tiles, **in order**, and then hit the Candy Kiss Castle at the very end to win.

-If you **miss** your color, your turn is over.

-If you shoot **another player's color**, it counts as a hit for them.

Regarding the **slides**

-If your color has a slide attached to it, the slide is disregarded for you (you can't slide down since your objective is already to hit your color)

-HOWEVER, if your opponent has a color with a slide attached, you can attempt to hit that color and slide down. If you're successful, the color you slide to becomes your **NEW** color and you continue from that point.

-BUT, if you attempt to hit your opponent's color that is attached to a slide and you **FAIL –** you must go back to **START**

Potential Game to Play with Baker Targets' **Primary** Target: **A Game of Memory and Repetition** (similar to the old electronic game 'Simon Says'):

2 Players (can be modified to accommodate more than 2). You can also have a 3rd player sitting out on the shooting and instead calling out the color (or number) that must be hit.

-Player 1 starts by choosing a color and shooting at it

-Player 2 shoots at Player 1's color, then chooses a 2nd color and shoots it (color 2 can be the same as color 1- remember, this is simply a game of memory and repetition)

-Player 1 shoots colors 1 and 2, and then chooses a 3rd color (again, it can be any color, even a color that's already been shot at) and shoots it.

-Player 2 shoots colors 1,2, and 3, and then chooses a 4th color and shoots it.

This pattern of playing continues until someone forgets the order of colors to shoot and/or misses the correct color. In other words, this is a game of both memory and skill.

The game can be played using the numbers instead of the colors. **OR it can be made extra difficult by making it **both** the correct color and correct number that must be shot.**
